LIME LUBRICATION control is an intelligent lubrication system that looks at temperature, time and pump stroke to determine the optimal lubrication delivery for the equipment's specific operating conditions.

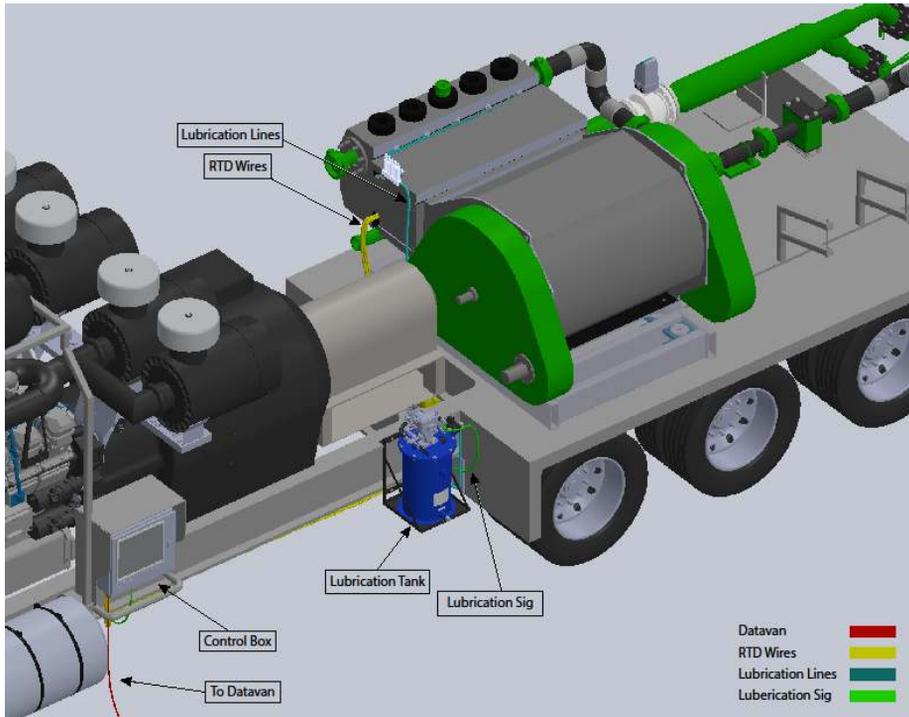

- System lubrication adjust automatically due to packing temperature
- Notifies pump operator of packing wear before failure
- Reduced lubrication cost
- Reduced NPT
- Works with any lubrication vendor
- Works with any pump control system

Patent Pending

LIME INSTRUMENTS

LIMELUBRICATION INTELLIGENT LUBRICATION CONTROL

The LIMELUBRICATION control system enables better lubrication delivery by adjusting system output automatically based on temperature, time, and/or pump stroke.

Injections Based On

- Temperature of the packing bore
- Time
- Pump stroke

Early Detection of Packing Wear

- Alarm notifications sent to pump operator
- Early operator actions can help protect pump

Remote Capabilities

- Real time data monitoring from the data van and/or web portal
- Manual override
- Alarm notifications

Works With any Lubrication System

Works With any Pump Controls System

- Integrated with Lime pump controls
- Stand alone use with 3rd party controls

Patent Pending
